## 示例代码说明文档

功能实现	包含工程	工程启动说明	工程操作方式
eureka 分布 式服务注册 中心	eureka-server-center eureka-server-center2 eureka-client01	首先启动 eureka-server-center 和 eureka-server-center2,然后启动 eureka-client01(本示例需要配置 host 文件,用来模拟不同的服务器,具体说明见代码注释)	浏览器分别输入 locakhost:8080 和 localhost:8081 将会显示服务注册中心,服务注册中心的数据共同拷贝对方,且都有注册的服务客户端信息
Ribbon 实现 负载均衡	eureka-server-simple-center simple-service-provide simple-service-provide2 ribbon-simple-loadbalanced	首先启动 eureka-server-simple-center,然后启动 simple-service-provide,simple-service-provide2,最后启动 ribbon-simple-loadbalanced	浏览器输入 localhost:8761,然后重新打开一个界面输入 localhost:8766/show,多次刷新,将会看到不同的结果,原因在于采用负载均衡方式获取两个服务的不同数据。
Feign 实现负载均衡	eureka-server-simple-center simple-service-provide simple-service-provide2 feign-simple-loadbalanced	首先启动 eureka-server-simple- center,然后启动 simple-service- provide, simple-service-provide2,最 后启动 feign-simple-loadbalanced	浏览器输入 localhost:8761,然后重新打开一个 界面输入 localhost:8769/feignshow,多次刷 新,将会看到不同的结果原因在于采用负载均衡 方式获取两个服务的不同数据。
Hystrix 断路器在 Ribbon 负载 均衡下实现	eureka-server-simple-center simple-service-provide simple-service-provide2 hystrix-ribbon-simple- circuit-breaker	首先启动 eureka-server-simple- center,然后启动 simple-service- provide,simple-service-provide2,最 后启动 hystrix-ribbon-simple-circuit- breaker	localhost:8761,然后重新打开一个界面输入 localhost:8766/show,多次刷新,将会看到不同 的结果,关闭 simple-service-provide simple-service-provide2 将会显示断路处理结 果,断路器能够有效的防止雪崩效应的发生
Hystrix 断路器在 Feign 负载均 衡下实现	eureka-server-simple-center simple-service-provide simple-service-provide2 hystrix-feign-simple- circuit-breaker	首先启动 eureka-server-simple- center,然后启动 simple-service- provide,simple-service-provide,最 后启动 hystrix-feign-simple-circuit- breaker	浏览器输 localhost:8761,然后重新打开一个界面输入 localhost:8769/feignshow,多次刷新,将会看到不同的结果,关闭 simple-service-provide 和 simple-service-provide 2 将会显示断路处理结果,断路器能够有效的防止雪崩效应的发生
断路器监控 在 Ribbon 负 载均衡下实 现	eureka-server-simple-center simple-service-provide simple-service-provide2 hystrix-dashboard-ribbon	首先启动 eureka-server-simple-center, 然后启动 simple-service-provide, simple-service-provide2, 最后启动 hystrix-dashboard-ribbon	浏览器输 localhost:8761,然后重新打开一个界面输入 http://localhost:8001/hystrix,然后在打开的界面里面设置地址为http://localhost:8001/hystrix.stream,delay值设为2000,设置标题,后点击monitorStream,进入监控面板界面,在上述完成的基础上,打开新的界面请求http://localhost:8001/hystrixshow,此时监测面板里面就会有数据变化

断路器监控 在在 Feign 负载均衡下 实现	eureka-server-simple-center simple-service-provide simple-service-provide2 hystrix-dashborad-feign	首先启动 eureka-server-simple-center,然后启动 simple-service-provide,simple-service-provide,最后启动 hystrix-dashborad-feign	浏览器输 localhost:8761,然后重新打开一个界面输入 http://localhost:8002/hystrix,然后在打开的界面里面设置地址为http://localhost:8002/hystrix.stream,delay值设为2000,设置标题,后点击monitorStream,进入监控面板界面,在上述完成的基础上,打开新的界面输入http://localhost:8002/hystrixshow,此时监测面板里面就会有数据变化
Turbine 断 路器聚合监 控 ribbon 负 载均衡下实 现	eureka-server-simple-center simple-service-provide simple-service-provide2 hystrix-turbine-simple- service hystrix-turbine-simple- service2 hystrix-turbine-actuator	首先启动 eureka-server-simple-center 然后是 simple-service-provide simple-service-provide2,之后 hystrix-turbine-simple-service、 hystrix-turbine-simple-service2,然 后启动 hystrix-turbine-actuator	浏览器输 localhost:8761, 然后重新打开一个界面输入 http://localhost:8099/hystrix, 然后在打开的界面里面设置地址为http://localhost:8099/turbine.stream, delay值设为 2000,设置标题,后点击 monitor Stream,进入监控面板界面,在上述完成的基础上,打开新的界面输入http://localhost:8005/simple 和http://localhost:8004/simple 此时监测面板里面就会有数据变化
Zuul 路由网 关转发实现	eureka-server-simple-center simple-service-provide simple-service-provide2 feign-simple-loadbalanced ribbon-simple-loadbalanced zuul-dispatch-center-server	首先启动 eureka-server-simple- center,然后启动 simple-service- provide,simple-service-provide2,之 后启动 feign-simple-loadbalanced、 ribbon-simple-loadbalanced,最后启动 zuul-dispatch-center-server	浏览器输 localhost:8761,然后分别打开一个界面输入 localhost:8011/api-a/show, localhost:8011/api-b/feignshow,将会分别转发到 service-ribbon (ribbon-simple-loadbalanced)和 service-feign (feign-simple-loadbalanced1)执行的功能。
Zuul 路由网 关过滤实现	eureka-server-simple-center simple-service-provide simple-service-provide2 feign-simple-loadbalanced ribbon-simple-loadbalanced zuul-filter-center-server	首先启动 eureka-server-simple-center, 然后启动 simple-service-provide, simple-service-provide2, 之后启动 feign-simple-loadbalanced、ribbon-simple-loadbalanced,最后启动zuul-filter-center-server	浏览器输 localhost:8761, 然后分别打开一个界面输入 localhost:8012/api-a/show?token=123, localhost:8012/api-b/feignshow?token=123, 将会分别转发到 service-ribbon (ribbon-simple-loadbalanced) 和 service-feign (feign-simple-loadbalanced2)执行的功能. 本示例做了一个过滤,即将不带 token 的请求都过滤掉。如果请求中不带 token 将不会被转发。
ServerConfi g 分布式配置 中心实现	eureka-server-simple-center server-config-center server-config-center2 server-config-client	首先启动 eureka-server-simple-center 然后 server-config-center server-config-center2, 然后启动 server-config-client (本示例中需要使 用 git 仓库)	浏览器输 localhost:8761,然后打开新的界面输入 localhost:8019/userinfo,就可以获得配置文件的内容

BUS 消息总线 下的配置更 新实现 zipkin 服务 链路追踪实 现	eureka-server-simple-center server-config-center2 bus-server-config-client bus-server-config-client2  eureka-server-simple-center sleuth-zipkin-server sleuth-zipkin-client sleuth-zipkin-client2	首先启动 eureka-server-simple-center 然后 server-config-center、server-config-center2, 之后启动 bus-server-config-client、bus-server-config-client2(本示例需要使用 RabbitMQ 和 git)  首先启动 eureka-server-simple-center,然后 sleuth-zipkin-server,之后启动 sleuth-zipkin-client、sleuth-zipkin-client2	浏览器输 localhost:8761, 然后打开新的界面输入 localhost:8023/userinfo 和 localhost:8066/userinfo 就可以看到配置文件的内容,修改配置文件,然后在发送一个 post 请求http://localhost:8023/actuator/busrefresh,重新请求之后的 userinfo 就会发生变化,而服务没有重新启动首先打开浏览器输 localhost:8761, 然后打开http://localhost:9411/点击切换到依赖分析,然后分别请求 http://localhost:8055/show2 和http://localhost:8057/show1,回到依赖分析页面刷新就可以看到服务之间的依赖关系
stream消息 驱动下的服 务消费者与 服务提供者 通信	eureka-server-simple-center stream-provider-server stream-consumer-server	首先启动 eureka-server-simple-center ,然后启动 stream-provider-server ,最后启动 stream-consumer-server(本 示例需要使用 RabbitMQ)	首先打开浏览器输 localhost:8761, 然后请求 http://localhost:8401/produceMessage/hello1 , 然后就会在 stream-consumer-server 中打出日志。
